

Mrs. Riza and Mrs. Robinson's third grade class recently explored engineering in their Science class. The students were engaged in the STEM project which demonstrated the engineering process. They were tasked with building a bridge using only cards and they worked in small groups to plan, design, create, test, and evaluate their final products.

The third-grade students were able to portray the qualities of a Bronco, which included being resourceful, innovating, and exhibiting confidence in their project.
